

## **Christine Levêque**

**Director Business Innovation Benelux & Germany**

**SUEZ, Belgium**

Christine is the Director Business Innovation for the business unit Recycling & Recovery Benelux and Germany at SUEZ. In her function, Christine leads a team of developers facilitating and accelerating the emergence of new business ventures in those four countries. The last years have seen her successfully focussing on projects related to the recycling of plastics.

Christine holds a Master's degree in Mechanical Engineering from the U-Mons Polytechnical faculty in Belgium. From the revamping of nuclear power plants to the development of biogas stations, Christine spent half of her career taking care of the energy resources, before making the move in 2007 towards the material resources and associated waste recycling business.

Christine lives in Belgium with her husband and two children, in a country where she hopes to see all packaging plastics being soon collected selectively in an apart bin for material recycling, as it is already the case in neighbour countries.
