Damien DALLEMAGNE

Project Coordinator for the Creation of a European Association Dedicated to CO2 Utilisation

Damien Dallemagne holds an Engineering degree from the University of Liège, an MSc in Environmental Technology from the Imperial College in London and an MBA from the University of California in Berkeley.

Damien has had a dual career in industry (for 8 years) and in management consulting for close to 15 years (first with Arthur D. Little, then by creating Innergic, his own consulting company).

With Innergic, Damien is mostly active in the fields of innovation management and sustainable development. Over recent years, Damien has been particularly involved in accompanying the development of multi-stakeholder innovation networks associating large industrial companies, SMES, research organizations, universities, and public institutions. For example, he has played a key role in coaching the creation of the European Knowledge & Innovation Community (KIC) on Raw Materials,

While he was Managing Director of GreenWin, the Walloon cluster for environmental technologies, Damien wrote the original application file for the SCOT project. As a follow-up of this 3-year project which just ended in September 2016, he is now coordinating the efforts to set up a European Association on CO2 Transformation.
