### **Marion Timmermans, Business Development Manager at Flowid**

Marion Timmermans finished her Master BioMedical Engineering in 2009 at the Eindhoven University of Technology. After which she started as Product Developer at Dolphys Medical where she was responsible for the development of an implant for on demand release of pain medication. She continued her career as Business Developer at EmulTech which markets microfluidic technologies. In 2015 she moved to Flowid and within Flowid her key role consists of building new collaborations between the potential customer & Flowid and strengthening existing customer relationships. She strives to optimize and accelerate growth and keeps searching for new business opportunities. Her added value is to combine people and their expertise in combination with a thorough analysis of the problem. To realize together a more efficient process industry.
